

Kiosk Design

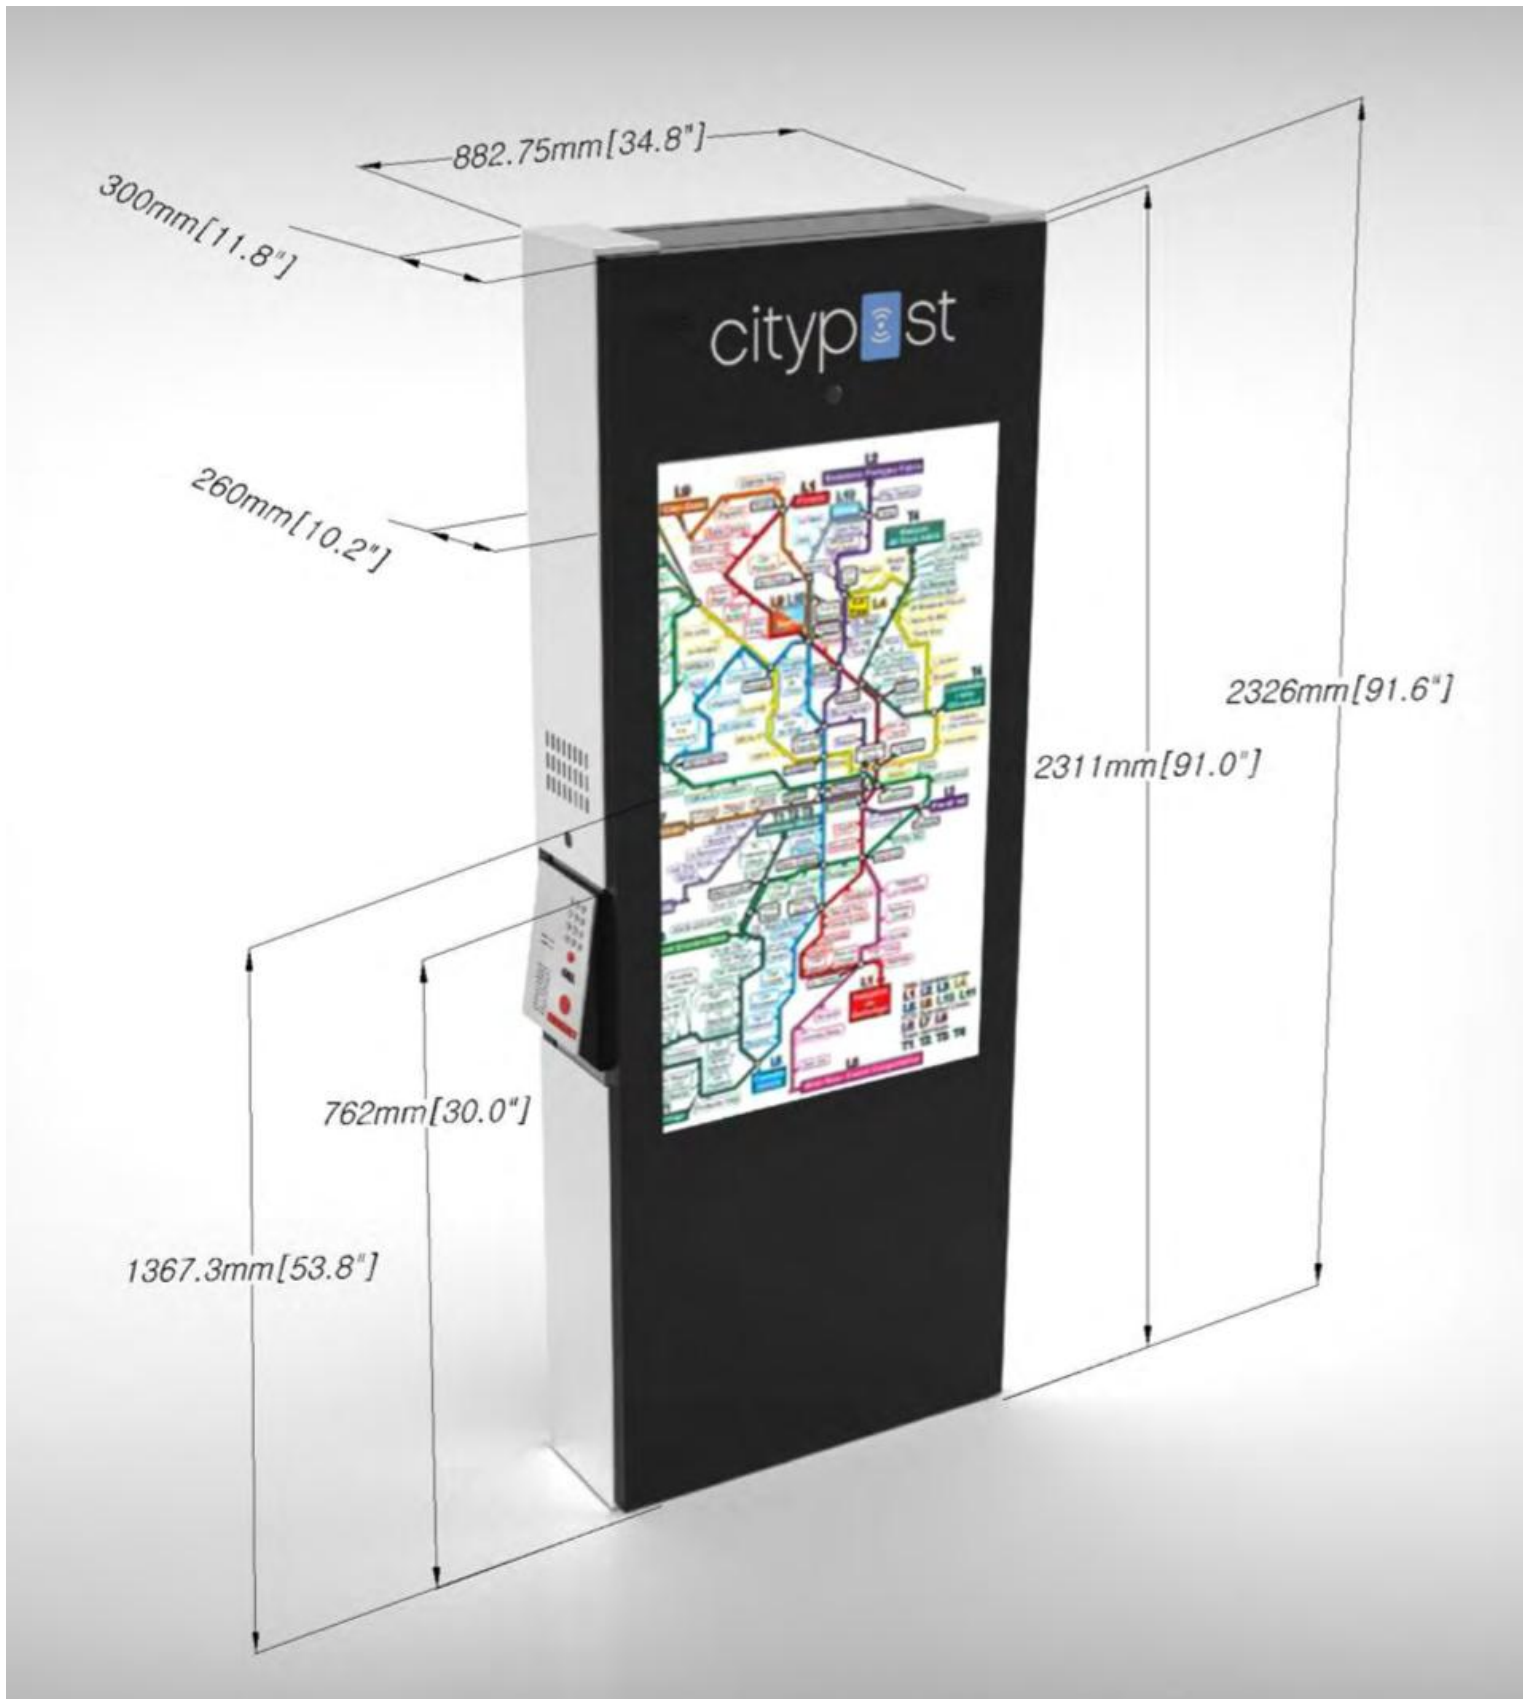

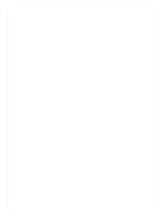

SCM Kiosk Design

Top Light Function:

1. Allow Cities, transit, retail and campuses the ability to adjust the color of the top light to match their general colors. Ie: DART could be gold or sometimes blue. Miami could be lime green or blue, Louisville can be orange or blue. Holidays can be green for st Patrick's day. Red for Valentines day, Teal when their sports team wins the championship.... etc.
2. The option for the light to turn red when 911 is initiated. Same concept as the current CityPost logo

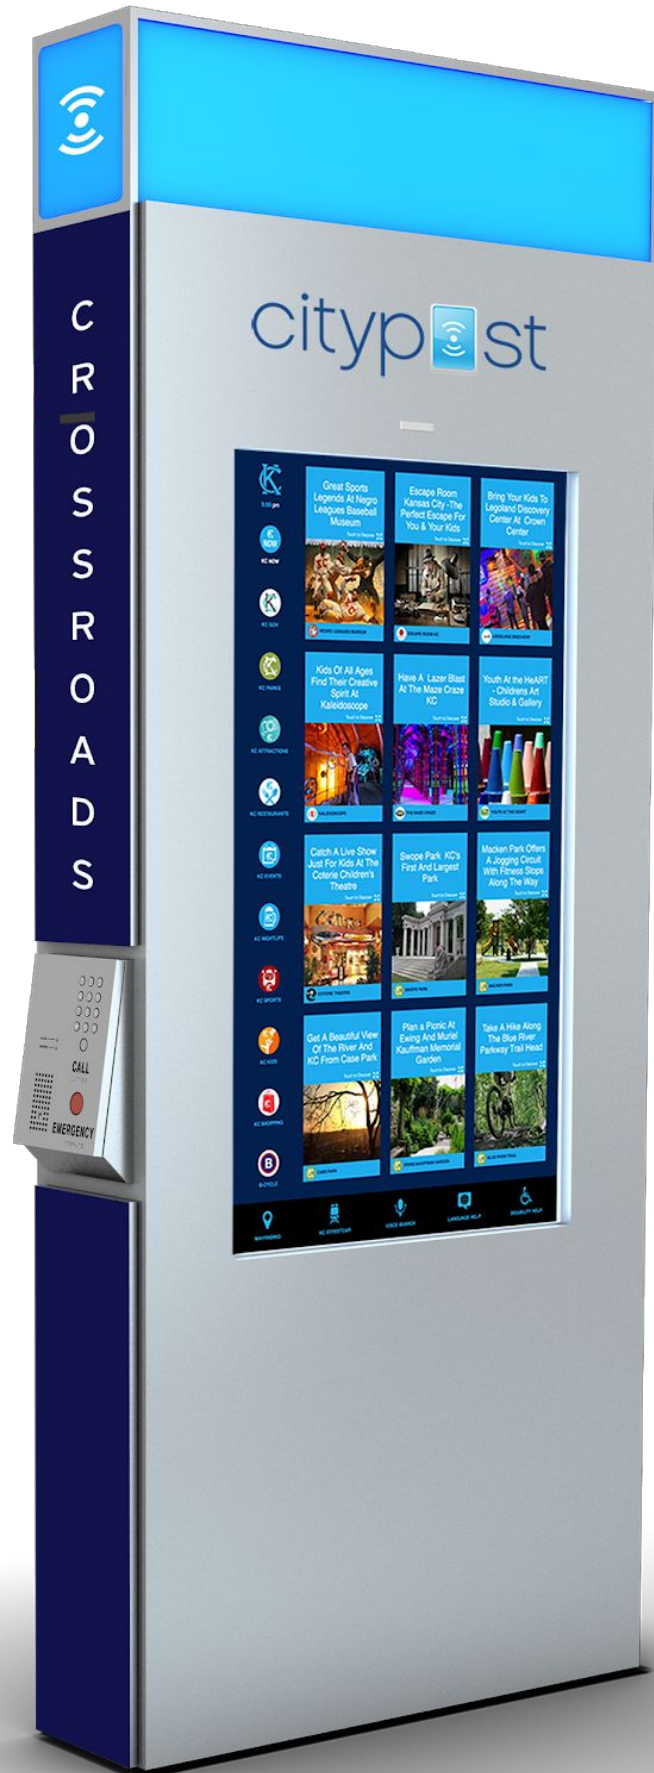

Current unit is 91.6 inches / 7.63 feet without light extension

The light box extension adds an additional 14 - 20 inches

The unit will be in the range, + or - of 108 inches, 9 feet

6 Keys with integral USB interface
