FH® Inspector 3 for iPad® is here!

Download on the App Store

FHInspector iPad app requires connection to the FIREHOUSE Software system for data exchange. iPad is a registered trademark of Apple Inc.

FIRE INSPECTIONS WITH AN IPAD. COOL.

FH Inspector 3 for iPad brings you:

- Faster, more responsive screens
- Easier toggling between full-screen maps and inspection listings with mini-maps
- Improved synchronization, data management and in-app error reporting
- A more intuitive iOS interface with quick access to various sections of the inspection process

Record, schedule and sync inspection data in the field. Use your iPad camera to snap and attach photos, add notes and track inspection activity in real time with Google Maps™ check-in feature.

FH® Inspector 3 for iPad®

Manage More Inspections

Track activity reporting by unit with Google Maps-based activity tracking, and the FH Cloud-based Management Portal.

Snap Violation Photos

Now it's easy to snap photos of violations right from your iPad for quick visual reference at the reinspection.

Signature Capture

Once the inspection is complete, review violations, capture signatures and print or email the occupant's copy on site.

General Inspection Notes
General Inspection notes can now be tracked and synced back to FH.

Check-In Feature
Current location is tracked for each iPad once an inspection is started and completed. (Requires connectivity in the field.)

Default Re-inspection Days
From the iPad app the inspector can set default re-inspection days.

Violation Photos
The User now has the ability to take photos for violations from the iPad. Photos are displayed on the violation notice and are available during re-inspection.

Resume Sync
If the iPad sync stops, errors or crashes, the sync itself will keep track of the last spot and resume the sync from there.

Locations
Scheduled, Completed and Check In locations are represented on a Google Map.

Works with FH Cloud
Your Inspector for iPad data can be easily maintained in the cloud.

Custom Field Configurations
Your department can now configure certain fields to allow entry/updates from the iPad.
