City of Aurora  
Ground Storage Tank Rehab.

#### Interior Floor, Exterior Abrasive blasting and Containment Plan

##### Interior Floor:

The interior floor wherever accessible will be abrasive blasted using the Faster Blaster centrifugal blasting machine. The machine will be using all new abrasive and will be a blend of s390 shot, s460 shot and g25 grit in order to achieve the required profile. All areas that cannot be accessed will be abrasive blast cleaned using conventional abrasive blasting with coal slag.

##### Exterior roof and Walls:

The exterior roof and walls will be abrasive blasted using a Self Contained Centrifugal blasting machine. The machine will be the Faster Blaster. The steel shot and grit used in the machine will be delivered new to the project. The areas not able to be accessed using the robotic blasting machine will be wet abrasive blast cleaned using Hold Tight and water solution to hold the blast. The abrasive blasting will be performed off of suspended scaffolding which when being performed will have the 3 sides covered with mesh to prevent abrasive from traveling beyond the tarp. We will also spray the zinc primer off of the same equipment and use the same precautions with the mesh. (A letter from the coating manufacturer stating Hold Tight will not effect the coating will be provided upon award.)
