The Bunker's mission is to establish training and ride programs in various types of uncommon aircraft by creating an environment that helps promote and motivate the pilots of today and tomorrow to be safer, more experienced, and better skilled while increasing the visibility of the taildragger, aerobatic, and warbird communities and the positive values to a pilots skillset that can be acquired through them.

To operate within a high standard of safety and deliver advanced pilot training, **The Bunker** has developed its own syllabus and curriculum for the training missions that are listed below. Revisions can be made to this list to accommodate for the introduction of similar training programs. In addition, strategic media collaborations, developing and establishing prudent marketing partnerships allow for events to be held at **The Bunkers** facility to aid in the visibility of the company and the Aurora Municipal Airport, itself. These events can consist of, although are not limited to, holding annual or semi-annual aircraft ride days, participating in the Experimental Aircraft Associations' Young Eagles program, hosting the International Aerobatic Clubs' competitions, and more.

Furthermore, **The Bunker** can aid in supporting various flight contracts for local flight schools by offering training that is not traditionally available by their own means, as well as the Department of Defense, Federal Bureau of Investigation, and other Government and Military entities.

The Bunker can also support various opportunities that are, again, not limited to air-to-air photography and videography, event flyovers, flight test support, ground seminars, advertised aircraft rides to the public meeting the Federal Aviation Regulation 119.1 requirements, as well as aid customers that are in a position to acquire their own aircraft by providing professional consultation and insight.

- Tailwheel Transition
- Basic, Intermediate, and Unlimited Aerobatics
- Upset Prevention and Recovery Training (UPRT)
- Loss of Control Training (LOC)
- Spin Training
- Introduction to Competition Aerobatics
- Introduction to Formation Flying
- Advanced Spin Series Training
- Radial Engine Familiarization
- Extra 300/330 Insurance Completion Program
- Extra Type Solo Rental Program
- High Performance Taildragger Transition
- Experimental Aircraft Type Transition
- Warbird Transition
- Warbird and Aerobatic Aircraft Ride Programs
