

TriCaster 2 Elite

TriCaster 2 Elite is a more flexible approach to digital media production. With TriCaster 2 Elite, content creators can integrate current and future resources into digital media production models that employ standard network infrastructures. TriCaster 2 Elite supports distributed operation with access to more media formats, enablement of more workflow possibilities, and providing more business opportunities.

TriCaster 2 Elite is the most transformative digital media production solution in the industry. Designed for content creators that require a future-ready production ecosystem that grows with their business, TriCaster 2 Elite provides media input-output flexibility to address the needs of media content producers beyond just broadcast video.

No other solution enables digital media workflows of the scale and scope of NewTek TriCaster 2 Elite. The agile software driven IP native technology and functionality provides the capability, connectivity, and control needed to take on any sort of digital media production. With flexible implementation, a more complete set of capabilities, and a unique capacity for distributed production. TriCaster 2 Elite removes the traditional boundaries of media formats, I/O, channels, and delivery.

- **Complete Digital Media Production**

Produce digital media content with multi-channel recording, multi-channel remote guest conferencing, upload of clips, multi-angle instant replay functionality, packaging of media content including multi-cam acquisition, compositing of sophisticated static and animated graphics, multimedia and visual effects, advanced audio processing, input and output of video in non-standard aspect ratios, frame rates, and resolutions for any platform and destination. Deliver with up to 8 3G or 2 UHD configurable mix outputs.

- **Limitless IP Processing**

NDI® video, audio and data transmission over IP with near-zero latency and instant access to and seamless interchange with essentially unlimited IP sources from anywhere across the network in real time. Linking of multiple locations over IP to create sophisticated multi-system, multi-site workflows. Support for up to 32 video input sources and up to 48 output signals over IP, all independently configurable through software.

- **Interconnected Production**

Inputs, outputs, and media assets are readily available and accessible by any user in any location on the network. Unrivaled, scalable capabilities include multi-source video processing, advanced audio, multimedia and visual effects, graphics integration, and multi-platform delivery output. Run shows using NewTek Live Story Creator production automation based on Microsoft Word® documents using teleprompter control with TriCaster 2 Elite mixing and effects together with LiveGraphics. Deploy pushbutton automation using NewTek LivePanel™ for creation of software-based custom control panels to operate TriCaster 2 Elite from a desktop or mobile device- anywhere on the network.

- **Distributed Operation**

Use NDI® technology to move video, audio, and data from one TriCaster 2 Elite system to another. Encompass all compatible systems, devices, and applications available to the network. Communicate with other systems and compatible edge devices over IP and become accessible for operation from any location on your network—even from multiple remote locations.
