1 OF 4

South Perimeter Yard = 811 Feet  
 811 divided by 100 = 8.1  
 8.1 x 3 CTE = 24.3 or 25 CTE's  
 Credit for existing canopy/evergreen trees:  
 Total existing inches = 340.0  
 340.0 divided by 12 = 28.3 CTE's (+3.3 CTE's)

East Perimeter Yard = 512 Feet  
 512 divided by 100 = 5.1  
 5.1 x 3 CTE = 15.3 or 16 CTE's  
 Credit for existing canopy/evergreen trees:  
 Total existing inches = 27.5  
 27.5 divided by 12 = 2.3 CTE's  
 16 CTE's less 2.3 = 13.7 Req. CTE's

**GENERAL NOTES:**

Plant material shall be nursery grown and be either balled and bur-lapped or container grown. Sizes and spreads on plant list represent minimum requirements.

The requirements for measurement, branching and ball size shall conform to the latest addition of ANSI Z60.1, AMERICAN STANDARD OF NURSERY STOCK by the American Nursery & Landscape Association.

Any materials with damaged or crooked/disfigured leaders, bark abrasion, sunscald, insect damage, etc. are not acceptable and will be rejected. Trees with multiple leaders will be rejected unless called for in the plant list as multi-stem or clump (cl.).

If any mistakes, omissions, or discrepancies are found to exist with the work product, the Landscape Architect shall be promptly notified so that they have the opportunity to take any steps necessary to resolve the issue. Failure to promptly notify the Landscape Architect and the Owner of such conditions shall absolve them from any responsibility for the consequences of such failure.

Under no circumstances should these plans be used for construction purposes without examining actual locations of utilities on site, and reviewing all related documents mentioned herein, including related documents prepared by the project Civil Engineer and Architect.

Civil Engineering or Architectural base information has been provided by others. The location of various site improvements on this set of drawings is only illustrative and should not be relied upon for construction purposes.

Quantity lists are supplied as a convenience. However, Bidders and the Installing Contractor should verify all quantities. The drawings shall take precedence over the lists. Any discrepancies shall be reported to the Landscape Architect.

Actions taken without the knowledge and consent of the Owner and the Landscape Architect or in contradiction to the Owner and the Landscape Architect's work product or recommendations, shall become the responsibility not of the Owner and the Landscape Architect, but for the parties responsible for the taking of such action.

Refer to Civil Engineering documents for detailed information regarding size, location, depth and type of utilities, as well as locations of other site improvements, other than landscape improvements.

Plant symbols illustrated on this plan are a graphic representation of proposed plant material types and are intended to provide for visual clarity. However, the symbols do not necessarily represent actual plant spread at the time of installation.

All plant species specified are subject to availability. Material shortages in the landscape industry may require substitutions. All substitutions must be approved by the Village, Landscape Architect and Owner.

The Landscape Contractor shall verify location of all underground utilities prior to digging by calling "J.U.L.E." (Joint Utility Location for Excavators) 1-800-892-0123 and any other public or private agency necessary for utility location.

All perennial, ornamental grass, groundcover and annual beds shall be top dressed with a minimum of three inches (3") of mushroom compost. The top dressing shall be worked into the soil to a minimum depth of nine inches (9") by the use of a cultivating mechanism. Upon completion perennials & ornamental grasses shall be mulched with an additional two inch (2") layer of shredded wood mulch; Annuals & groundcovers shall be covered with an additional two inch (2") layer of mushroom compost.

All other planting beds and tree saucers shall be mulched with a minimum of three inches (3") of shredded wood mulch.

Planting beds adjacent to building shall be mulched in their entirety to the building foundation. Plant materials shall not be installed under building overhangs and other such areas which do not receive natural rainfall.

Mulch beds at the time of planting shall extend a minimum of two feet (2') beyond the center of a shrub.

All bed lines and tree saucers shall require a hand spaded edge between lawn and mulched areas.

Grading shall provide slopes which are smooth and continuous. Positive drainage shall be provided in all areas.

Sod shall be mineral base only.

Seed mixes shall be applied mechanically so that the seed is incorporated into the top one-half inch (1/2") of the seed bed. The seed shall then be covered with the specified blanket (installed per manufacturer's specs) or Hydro-mulch.

All plant material shall be guaranteed for one (1) year from the date of acceptance.

**PLANT LIST**

KEY	QTY	BOTANICAL NAME	COMMON NAME	SIZE/TYPE
<b>DECIDUOUS SHADE TREES</b>

ALL EXISTING LANDSCAPING NOTED FOR PRESERVATION, SHALL BE PROTECTED DURING CONSTRUCTION VIA PLASTIC SAFETY FENCING. FENCING SHALL BE 4' HIGH AND ATTACHED TO STEEL DRIVEN POSTS SET NO FARTHER THAN 8' O.C. IT SHALL BE INSTALLED AT THE PERIPHERY OF THE DRIP LINE OF EXISTING PLANT MATERIAL OR BEYOND TO PREVENT STORAGE OF VEHICLES OR MATERIALS AND THE ENCROACHMENT OF GRADING AND CONSTRUCTION EQUIPMENT.

CONSTRUCTION FENCING SHALL BE ERRECTED PRIOR TO ANY GRADING OR CONSTRUCTION ACTIVITIES—PREVENTING COMPACTION OF ROOT SYSTEMS OF EXISTING TREES AND SHRUBS. THE FENCING SHALL ENCLOSE THE AREA BENEATH THE DRIP LINE OF THE TREE CANOPY AND SHALL REMAIN IN PLACE UNTIL ALL CONSTRUCTION IS COMPLETED. NO PARKING, MATERIAL STORAGE OR CONSTRUCTION ACTIVITIES SHALL BE PERMITTED WITHIN THE FENCED AREA.

ORANGE POLYETHYLENE SAFETY FENCING PLACED AT OR BEYOND DRIP-LINE

4' TALL DRIVEN STEEL POSTS @ 8' O.C. MAX.

Rating	Description	General Criteria
1	Excellent	The tree is typical of the species, has less than 10 percent deadwood in the crown that is attributable to normal causes, has no other observed problems and requires no remedial action.
2	Good	The tree is typical of the species and/or has less than 30 percent deadwood in the crown, 1 or 2 minor problems that are not immediately lethal to the tree, and no significant decay or structural problems, but the tree may need remedial care above normal care in order to minimize the impact of future stress and to ensure continued health.
3	Fair	The tree is not typical of the species and/or has significant problems such as 30 to 50 percent deadwood in the crown, serious decay or structural problems in the trunk, insect, disease or other problems that can be minimally lethal to the tree or create a hazardous tree if not corrected in a short period of time or if the tree is subjected to additional stress.
4	Poor	The tree is not typical of the species and/or has over 50 percent deadwood in the crown, major decay or structural problems in hazardous or is severely involved with insects, disease, or other problems that even if aggressively corrected would not result in the long term survival of the tree.
5	Dead	Less than 10 percent of the tree shows signs of life.
