The Zencity Community Survey

A recurring survey that never stops running, the Zencity Community Survey measures how satisfied residents are with their community and with local government-provided services and allows officials to compare these scores over time and against a cohort of similar communities.

Survey Methodology

790 respondents were digitally recruited (e.g. over social media, mobile apps, local websites, and survey panels) between May - June 2023. Zencity built a representative sample by matching respondent data to the U.S. Census Bureau's race, ethnicity, age, and gender distributions in Aurora. Finally, rake-weighting was applied as a statistical safeguard to balance out any remaining discrepancies in distribution, so no demographic group is overrepresented or underrepresented in the final score.

Score Calculation

The overall satisfaction score is calculated by averaging how each resident rated quality of life and community characteristics on a numeric scale (1-5), and classifying this average as satisfied, neutral, or not satisfied. The resulting score, then, is the weighted percentage of residents who gave an overall satisfied rating.

Overall Satisfaction

The overall satisfaction score is calculated from the questions in the two main sections of the survey: general quality of life and satisfaction with different characteristics of life in your community.

We take the average of these questions, then classify the score as positive (3+), neutral (1.5 to <3), or negative (≤ 1.5). The percentages represent the percent of respondents in each category.

If you have a previous cycle, the up (↑) and down (↓) arrows will show the change in percentage points.

75%

of 790 surveyed residents are satisfied with life in Aurora

These are the main measures of satisfaction in your community

The bars on the right show the proportion of responses that are positive (4 or 5), neutral (3), or negative (1 or 2). The percentages show the percent in the positive category.

We take the average of the Community Characteristics, then classify the score as positive (3+), neutral (1.5 to <3), or negative (≤ 1.5). The percentages represent the percent of respondents in each category.

If you have a previous cycle, the up (↑) and down (↓) arrows will show the change in percentage points.

QUESTION	RESIDENT SATISFACTION
How is the overall quality of life in Aurora?	64% 
How likely are you to recommend Aurora as a place to live?	56% 
How likely are you to be living in Aurora 5 years from now?	56% 
Average rating from the Community Characteristics questions	75% 

Demographic Breakdown

Smaller sample sizes can lead to unreliable estimates. For this reason, we hide scores for groups under 30 respondents.

For groups between 31 and 50 respondents, we highlight the small sample size using an asterisk (*). Use these scores with caution.

The ratings residents gave these parts of life showed a connection to their overall satisfaction

In order to appear here, a characteristic must a) demonstrate a strong correlation with how residents rated their overall satisfaction and b) receive a notably high or low satisfaction score

Community Benchmark

How we compare Aurora to other similar communities

Residents from more than 1,000 communities across the United States have participated in Zencity's Community Surveys. We use the combined results from these surveys to produce our benchmark estimates. By averaging across respondents from dozens or hundreds of different communities, it's possible to arrive at a picture of what the results for a "typical" community in that cohort look like. This offers a way to compare your results- particularly strengths and areas for improvement- within a greater context. Each community running a Community Survey with Zencity receives a customized community benchmark cohort that reflects its unique characteristics.

First, the cities, towns, and counties in the United States are allocated into cohorts using variables such as population size, geography, density, and demographics to group similar communities together. Then, each cohort's benchmarks are calculated using the same scoring methodology outlined in the Survey Methodology section. Finally, since recruitment methods can differ slightly according to the needs of each community, cohort benchmarks are adjusted accordingly to match the exact distribution of recruitment methods.
