

This area and also area west of here floods; trying to minimize area from ROW draining to this spot

topo limits

Add ICB

add gravel to build up ROW

Add ICB

Add ICB

water bypasses this inlet in agg and drains towards the rear to white garage area. We will need to try to prevent water from running down drive possibly by adding stone in ROW and maybe adding infiltration catch basins since combined system here.

actual location of inlet - convert to ICB, possibly connect to adjacent ICB for double inlet
