

INFO SHEET

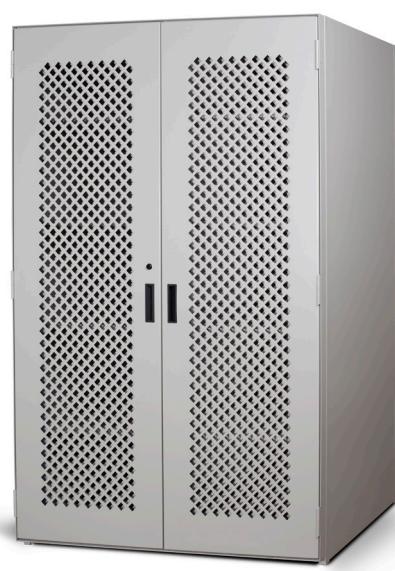

HINGED DOOR SYSTEMS

FRAME-MOUNTED DOORS

Spacesaver's frame-mounted doors can be utilized in a variety of applications to meet a wide range of storage needs. Three door types—single-wall, double-wall, and window—combine to create a complete line-up, providing distinct features and options that can be installed on Spacesaver's 4-post and case-type shelving and welded cabinets. The same shelving systems, when used in conjunction with frame-mounted doors, create flexible, adaptable cabinets that can be used for both static shelving applications or with mobile shelving systems.

SINGLE-WALL FRAME-MOUNTED DOOR
WITH ELECTRONIC LOCK TYPE

DOUBLE-WALL FRAME-MOUNTED DOOR
WITH OFFSET DIAMOND PERFORATION PANEL TYPE

WINDOW FRAME-MOUNTED DOOR
WITH GLASS PANEL TYPE

FRAME-MOUNTED DOOR TYPES:

SINGLE-WALL

The most foundational of the door types, the single-wall frame-mounted door is available as a solid panel reinforced with interior supports. Items stored behind the door are not visible.

DOUBLE-WALL

The double-wall frame-mounted door is offered in four distinct panel types: solid, offset diamond-perforated, aligned diamond-perforated, and louvered panel. These types are important based on visibility needs—the solid and louvered panel types create zero visibility, while the offset diamond-perforated panel type restricts visibility and the aligned diamond-perforated provides increased visibility.

WINDOW

Designed with an external welded panel with four internal supports, the window frame-mounted door is offered in four distinct panel types. Single diamond-perforated and single round-perforated offer increased visibility and ventilation, while the glass and acrylic doors promote complete visibility.

FEATURES:

CONFIGURABILITY

Creating a storage solution with frame-mounted doors on 4-post and case-type shelving and welded cabinets, the configurations are unlimited. The doors can be configured to have stacked doors, creating multiple cabinets within a single shelving unit.

RIGIDITY

With 18- or 20-gauge steel construction and four-sided frame design, the frame-mounted doors have unrivaled strength and durability.

VERSATILITY

A variety of options in door size, panel type, handle, paint colors, and locks create endless configurations for cabinets.

SECURITY

The doors provide a variety of lock options for cabinet security. Choices of no lock, keyed lock, or electronic lock are available for all door types, with double-wall and window doors offering an additional hasp for padlock option.

CUSTOMIZATION

In addition to the options provided, frame-mounted doors also have a variety of panel options and paint colors to match your specific environment.

ADDITIONAL DETAILS

SINGLE-WALL

The single-wall frame-mounted door is manufactured with 20-gauge steel and is only available in a solid panel that is reinforced with interior supports to provide rigidity.

DOUBLE-WALL

The double-wall frame-mounted door is manufactured with 18-gauge steel and is available in four panel options:

- The solid panel is welded with two steel panels to provide strength and durability. Items stored behind solid panel doors are not visible.
- The offset diamond-perforated panel is welded with two diamond-perforated panels that are offset. The offset of the perforation provides ventilation and restricted visibility to items stored behind the door.
- The aligned diamond-perforated panel is welded with two diamond-perforated panels that are aligned. This provides ventilation and increased visibility.
- The louvered panel is welded with two steel panels with the exterior panel louvered and a pegboard interior panel. This panel provides ventilation and zero visibility to items stored.

WINDOW

The window frame-mounted door is manufactured with 18-gauge steel and designed with an external welded panel with four internal supports. It is available in four panel options:

- The single diamond perforation is welded with a single diamond-perforated panel. The single perforation provides ventilation and increased visibility.
- The single round perforation is welded with a single round-perforated panel. Similar to the diamond, the round perforation provides ventilation and increased visibility.
- The glass and acrylic panels provide complete visibility to items stored behind the door.
