FIREHOUSE
Software®

A Xerox Solution

FIREHOUSE Software, A Xerox Solution, is the industry's most comprehensive fire and EMS records management system. It's also the most widely used Fire department records management system. We continue to develop new products to increase accuracy, accountability and safety, while making critical information management fast, simple and more cost effective.

FH®net

The newest version of FIREHOUSE Software, FHnet will transform the way you think about FIREHOUSE Software. We developed FHnet to harness new technologies and new ways of working, while making it easier than ever to use. This beautifully redesigned software is almost effortlessly intuitive, more scalable, more flexible, and more powerful than ever.

FH®Cloud Services

FIREHOUSE Software is now accessible from anywhere, anytime, and almost any device with FH Cloud Services. There's no hardware to buy, nothing to install, no software to manage. We handle updates and backups for you, automatically. Managing your data AND your reporting has never been so convenient–and cost effective.

FH®Mobile Response

Synch incident-critical data from your FH Software with the most powerful mapping tools available. Open and view multiple maps at a time, view availability of critical items and information, and access preplans with one click. And when you need eyes on the road, audible turn-by-turn navigation gets you to the scene safely.

FH®Medic

A state of the art, cloud based, NEMSIS GOLD CERTIFIED electronic patient care reporting system designed with the direct input of EMS administrators and paramedics, and engineered to meet the needs of EMS organizations nationwide. The interface allows for complete and accurate documentation of most patient care reports in as little as five to ten minutes.
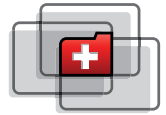

FH®inspector for iPad

FIREHOUSE Software has combined iPad's trademark interface and live GPS with your inspections, pre-incident plans, and permits, allowing your department to tackle more inspections, faster and easier than ever before.

FH®CAD Monitor

FH CAD Monitor is a stand-alone executable that creates records in your FIREHOUSE Software system based on information entered in your computer-aided dispatch (CAD) system, streamlining the transfer of critical initial incident data directly to your FH database in one simple step.

FH®Barcoding

FH Barcoding works seamlessly with FH to make quick work of critical inventory tracking tasks. Tag your equipment, then track its condition, location and maintenance quickly and simply. Scan, report...relax!

FH®CMS

Our partnership with Kaplan brings you access to the very best online Fire and EMS video training series on the market. Video reenactments take you through incidents to refresh and improve your knowledge. Interactive mini quizzes and activities throughout the Fire courses keep you engaged from start to finish.

FH®Cost Recovery

FH Cost Recovery goes beyond simple incident billing and claim services. We bill responsible parties on your behalf, for incidents such as fire investigations, vehicle accidents, HAZMAT cleanup, and more, as well as inspections and false alarms. We send the bill, you recover the cost. With no up front costs to your department!

FH®Sketch

The intuitive interface and seamless integration of FH Sketch is designed to make drawing, modifying, updating and exporting pre-plans simpler and easier than ever. Reference and utilize aerial photography, import DXF/DWG, CAD files or hand drawn plans, and draw right on top of them, then work with them in the field with FH Sketch Mobile.
