Executive Summary

- This report summarizes the findings of the Traffic Impact Study performed by Bowman Consulting Group (BCG) for the proposed Circle K Development located in the city of Aurora, Illinois.
- The purpose of this study is to determine the potential impact (if any) to the existing traffic operations within the surrounding roadway network caused by the proposed development.
- The project is located at the northwest corner of the intersection of N Farnsworth Ave. and Molitor Road, Kane County, Illinois.
- The proposed development entails a 5,200 SF Convenience Store, and Gas Station with 14 Vehicle Fueling Positions.
- A Traffic Impact Analysis Methodology Statement was prepared and shared with representatives from the City of Aurora.
- For purposes of this analysis and in accordance with the approved/ scope and methodology, the following intersections were analyzed in this report:
 - N Farnsworth Ave. & Molitor Rd.- (Signalized Intersection)
 - N Farnsworth Ave. & Site Driveway 1
 - Molitor Rd. and & Site Driveway 2
- Turning movement counts were collected Thursday, January 19, 2021 and January 03, 2021 for the morning (7:00 AM – 9:00 AM) and evening (4:00 PM – 6:00 PM) peak periods.
- The proposed development is expected to generate a total of 444 trips during the morning peak hour and 366 trips during the evening peak hour. It is anticipated that during the morning peak hour 338 of these are existing trips while the remaining 106 are expected to be primary trips. During the evening peak hour 278 of these trips are expected to be existing trips and the remaining 88 are expected to be new trips.
- For the purposes of this analysis, it is anticipated that the proposed development will be constructed and fully operational by the year 2021.
- The following scenarios were evaluated as part of this study:
 - 2021 Conditions without the proposed development - (2021 No Build)
 - 2021 Conditions with the proposed development - (2021 Build)
 - 2031 Conditions without the proposed development - (2031 No Build)
 - 2031 Conditions with the proposed development - (2031 Build)

- To evaluate the traffic operations, intersection capacity analyses were completed. The results indicate the following:

- The intersection of N Farnsworth Ave. and Molitor Rd. is expected to operate at acceptable LOS C during No Build and LOS D under Build conditions, with an increase in overall delay of less than 5 seconds for both the 2021 and 2031 horizon.

The eastbound left turning movement is expected to degrade from LOS D to LOS F under build conditions. Westbound thru/right movement is expected to maintain a LOS F during the morning and LOS E during the evening peak hours, under both the No Build and Build Conditions. All other turning movements are projected to operate at acceptable LOS D or better during both the No Build and Build Conditions for both the 2021 and 2031 horizon.

- The intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at an acceptable overall LOS A. Site driveway 1 is projected to operate at acceptable LOS C or better under build and Build with Improvement conditions. All other turning movements and approaches are projected to operate at LOS A.
- The intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A. Site driveway 2 is projected to operate at acceptable LOS C or better under build and Build with Improvement conditions. All other turning movements and approaches are projected to operate at LOS A.
- Turn lane warrant analysis were performed to determine whether the proposed site will warrant the installation of turn lanes at the proposed site driveways. The results indicate that a right turn lane will be warranted at driveway 1 based on the criteria presented on the Illinois Bureau of Design and Environment Manual, Chapter Thirty-Six, *Intersections*.
- Considering the results of the capacity analysis, the following improvements are recommended:
 - **Improvements on N. Farnsworth Ave. and Molitor Rd.**
 - Eastbound left turn increase storage from 75 feet to 150 storage and 125 taper.
 - Northbound left turn increase storage from 150 feet to 180 feet. (stripped)
 - Optimize splits.
 - **Improvements on N. Farnsworth Ave. and Driveway 1**
 - Southbound right turn lane.
 - **Improvements on Molitor Rd. and Driveway 2**
 - Southbound (Driveway 2) one entry Lane/Two Exit Lanes (without a median). The two exit lanes to be dedicated right and left turn lane.

Introduction

This report summarizes the findings of the Traffic Impact Study performed by Bowman Consulting Group (BCG) for the proposed Circle K located in the city of Aurora, Illinois.

The purpose of this study is to determine the potential impacts (if any) to the existing traffic operations within the surrounding roadway network caused by the inclusion of the proposed development site traffic.

Background Information

The proposed development entails a 5,200 SF Convenience Store and Gas Station with 14 Vehicle Fueling Positions. The project is located at the northwest corner of the intersection of N Farnsworth Ave. and Molitor Rd., Illinois. **Figure 1** depicts the site location.

Figure 1. Site location.

Access to the site would be provided via one (1) Full Access driveway along Molitor Rd. and one (1) Right-In/Right-Out driveway along N. Farnsworth Ave. The site plan is presented in **Appendix A**.

Traffic Impact Analysis Methodology

A Traffic Impact Analysis Methodology Statement was prepared and shared with representatives from the City of Aurora. A copy of the approved Traffic Impact Analysis Methodology Statement and proof of the coordination with the agencies is contained in **Appendix B**.

As shown in the Traffic Impact Analysis Methodology Statement and coordination the following items are to be analyzed in this report:

- Trip generation calculations (for the proposed site).
- Traffic assignment (trip distribution) for the proposed development.
- Capacity and queuing analyses.
- Right turn lane warrants at the proposed site driveways.

For purposes of this analysis and in accordance with the approved/ scope and methodology, the following intersections were analyzed in this report:

1. N Farnsworth Ave. & Molitor Rd.- (Signalized Intersection)
2. N Farnsworth Ave. & Site Driveway 1
3. Molitor Rd. and & Site Driveway 2

Figure 2 depicts the study area.

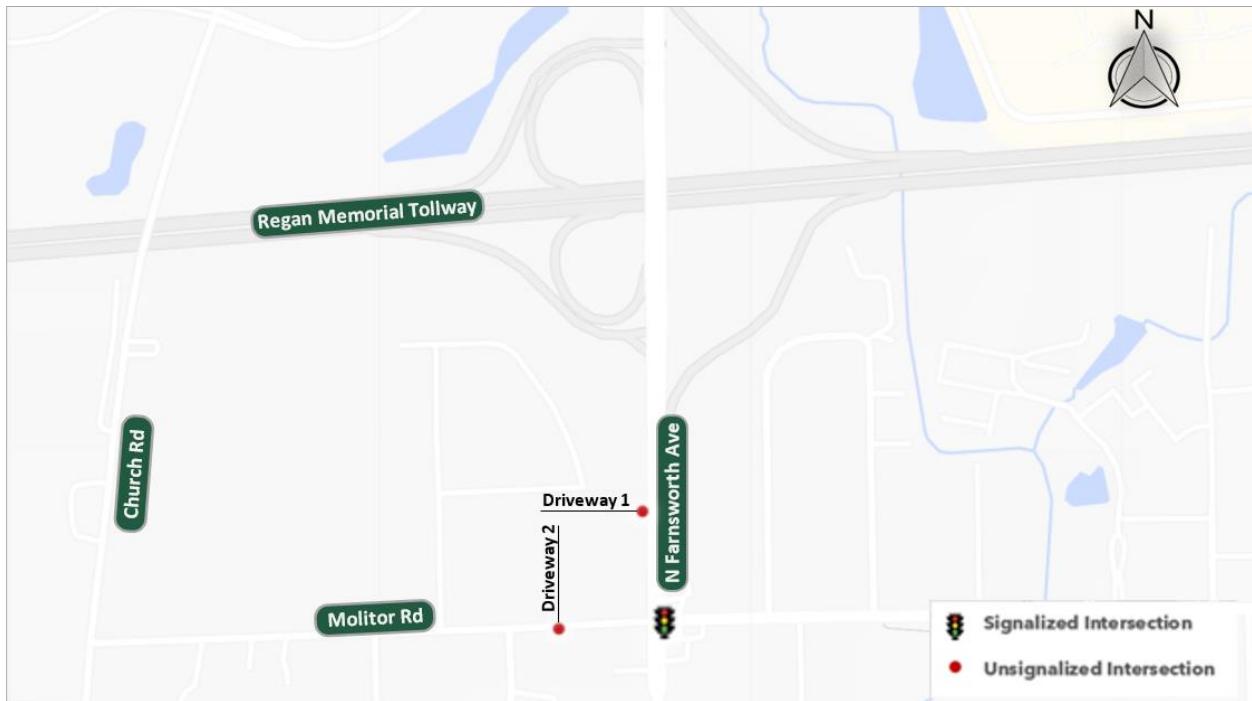

Figure 2 Study Area

To assess the traffic operation at the driveways, the following tasks were undertaken:

- Turning movement counts were collected during an Average weekday (January 19, 2021) for the morning (7:00 AM - 9:00 AM) and evening (4:00 PM - 6:00 PM) peak periods. These counts were used to identify peak hours, determine traffic patterns, and evaluate intersection Levels of Service.
- Trip generation calculations for the proposed development utilizing the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition

- Trip Distribution for the existing and proposed development based on trip distribution patterns from Illinois Department of Transportation (IDOT) Traffic count information online.
- Capacity analyses were prepared to determine existing and projected Levels of Service (LOS) and maximum queue lengths.

Roadway Network

N. Farnsworth Ave.:

Within the identified study area is a City-Maintained four-lane undivided roadway identified as an Urban Principal Arterial according to the IDOT Traffic Count Information online. It has a north-south alignment with a posted speed limit of 35 miles per hour.

Molitor Rd.:

Within the identified study area is a City-Maintained two-lane undivided roadway, identified as an Urban Major Collector according to the IDOT Traffic Count Information online. It has an east-west alignment and a 30 miles per hour posted speed limit.

Intersection Characteristics

Intersection of N. Farnsworth Ave. and Molitor Rd.

This intersection is currently a four-legged signalized intersection where Molitor Rd. has an east-west alignment, and N Farnsworth Ave. has a north-south alignment as shown in **Figure 3**.

Figure 3 N Farnsworth Ave. and Molitor Rd.

The Eastbound and Westbound approaches consist of one exclusive left-turn lane, and one shared through/right-turn lane. The Northbound and Southbound approaches consist of one exclusive left-turn lane, one exclusive through lane and one shared through/right-turn lane.

Site Access Driveways

Proposed conditions. As mentioned before, access to the site is proposed to be provided by one (1) right-in/right-out driveway along N Farnsworth Ave. and one (1) full-access driveway along Molitor Rd. The site plan is depicted in **Appendix A**.

Data Collection

For the purposes of this study the following data was collected:

- Inspections were conducted to obtain an inventory of existing roadway geometry, traffic control devices, and location of existing and proposed driveways.
- Published IDOT AADT information counts and functional classification information.
- Signal Phasing and timings.
- Turning movement counts were collected at the intersection of N Farnsworth Ave. & Molitor Rd.- (Signalized Intersection).

Traffic Forecast and Background Traffic

For the purposes of this analysis, it is anticipated that the proposed development will be constructed and fully operational by the year 2021. The following scenarios were evaluated as part of this study:

- 2021 Conditions without the proposed development - (2021 No Build)
- 2021 Conditions with the proposed development - (2021 Build)
- 2031 Conditions without the proposed development - (2031 No Build)
- 2031 Conditions with the proposed development - (2031 Build)

The existing peak hour traffic volumes extracted from the counts were used to determine the 2021 No Build traffic volumes, depicted on **Exhibit 1** in **Appendix C**.

To develop the 2031 No Build Traffic Volumes, the first step was to determine a background growth rate applicable for the study area roadway segments. For each roadway segment, the annual growth rate was calculated using the historical AADT information provided by the IDOT Average Annual Daily Traffic & Historical Counts 2010-2019 information. For a conservative approach a 0.5% minimum Average annual growth rate was used for all traffic in the study area.

The historical AADT information for the study area roadway, as well as the applied growth rates utilized for the analysis, are presented in **Table 1**.

Table 1 Historical AADT and Annual Growth Rates

Roadway	From	to	2010	2018	Avg Growth rate	Applied Growth rate
N Farnsworth Ave	Indian Tr	Dearborn Ave	23,500	23,500	0.0%	0.5%
Molitor Rd	Church Rd	Diehl Rd	6,400	8,300	8,750	6,050
					7.4%	1.8%
					-30.9%	-7.2%
						0.5%

Source: IDOT Average Annual Daily Traffic & Historical Counts 2010-2019

These growth rates were applied to the 2021 No Build Traffic Volumes to develop the 2031 No Build Traffic Volumes, depicted on **Exhibit 2** in **Appendix C**.

Trip Generation

The applicant is proposing to develop the site with the following land uses generating site traffic:

- 5,200 S.F. convenience store with 14 vehicle fueling positions.

Comparable land uses for the proposed development as per the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 10th Edition* were used to determine the number of trips generated the proposed development. The comparable land uses are listed below:

- Super Convenience Store with Gas Station (Land Use 960).

Pass-by Rates of 76% for (LU-960) were extracted from The Institute of Transportation Engineers Trip Generation Handbook 3rd Edition.

Table 2 displays the trip generation for the proposed development.

Table 2. Site Trip Generation

Land Use (1)	Size	Time	Total Trips ⁽¹⁾			Pass-By Trips			Net New Trips ⁽²⁾		
			In	Out	Total	In	Out	Total	In	Out	Total
LU-960		AM	222	222	444	169	169	338	53	53	106
Super Convenience Store with Gas Station	5,200 SF +14 VFP	PM	183	183	366	139	139	278	44	44	88

(1) Institute of Transportation Engineers Trip Generation (ITE), 10th Edition

(2) Pass-by Rates of 76% for LU-960 were extracted from the ITE Trip Generation Errata.

The proposed development is expected to generate a total of 444 trips during the morning peak hour and 366 trips during the evening peak hour. It is anticipated that during the morning peak hour 338 of these are existing trips while the remaining 106 are expected to be primary trips. During the evening peak hour 278 trips are expected to be existing trips and 88 are expected to be new trips.

Trip Distribution

The trip distribution was developed based on the trip distribution agreed upon coordination with the agencies. The regional trip distribution is presented in **Figure 4**.

Figure 4 Regional Trip Distribution

The site trip distribution was assessed based on the regional trip distribution and the primary and pass by trip generation rates. The Site Trips are presented in **Exhibits 3** in **Appendix C**.

The Site Trips were added to the 2021 and 2031 No Build Traffic Volumes to yield the 2021 and 2031 Build Traffic Volumes presented in **Exhibit 4** and **5** in **Appendix C**.

Capacity Analysis

The study intersection was analyzed for each scenario following the Highway Capacity Manual (HCM 6th edition) methodologies using the computer software package Synchro 10 with SimTraffic. The analysis uses capacity, Level of Service, and control delay as the criteria for the performance of the driveways.

Capacity, as defined by the HCM, is a measure of the maximum number of vehicles in an hour that can travel through an intersection or section of roadway under typical conditions. Level of Service (LOS) is a marker of the driving conditions and perception of drivers while traveling during the given time period. LOS ranges from LOS A which represents free flow conditions, to LOS F which represents breakdown conditions. **Table 3** shows the LOS for signalized and unsignalized intersections as defined by the HCM.

Table 3 HCM Level of Service Criteria

Unsignalized Intersections		Signalized Intersections	
Level of Service	Average Control Delay (sec/veh)	Level of Service	Average Control Delay (sec/veh)
A	≤10	A	≤10
B	>10-15	B	>10-20
C	>15-25	C	>20-35
D	>25-35	D	>35-55
E	>35-50	E	>55-80
F	≥50	F	≥80

Control delay is a measure of the total amount of delay experienced by an individual vehicle and includes delay related to deceleration, queue delay, stopped delay, and acceleration. **Table 3** displays the amount of control delay (in seconds per vehicle) that corresponds to the LOS for signalized and unsignalized intersections.

Capacity analyses were completed for the following scenarios for the morning and evening peak hours:

- 2021 Conditions without the proposed development - (2021 No Build)
- 2021 Conditions with the proposed development - (2021 Build)
- 2031 Conditions without the proposed development - (2031 No Build)
- 2031 Conditions with the proposed development - (2031 Build)
- 2021 Conditions with the proposed development - (2021 Build with Improvements)
- 2031 Conditions with the proposed development - (2031 Build with Improvements)

Capacity Analysis Comparison – No Build vs Build Conditions (Year 2021)

Capacity Analyses were conducted for the No Build and Build conditions (year 2021). The primary purpose for this approach was to compare the results in order to identify areas impacted by the proposed development. The capacity results are included in **Appendix E**.

Intersection of N. Farnsworth Ave. and Molitor Rd. (2021)

Based on the results of the capacity analysis, during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Molitor Rd. is projected to operate at an acceptable overall LOS C under No Build conditions and LOS D under Build Conditions, with an increase in overall delay of only 4.1 seconds on the morning and 4.0 seconds on the evening peak hour.

The eastbound left turning movement is expected to degrade from LOS D to LOS F under build conditions. Westbound thru/right movement is expected to maintain a LOS F during the morning and LOS E during the evening peak hours, under both the No Build and Build Conditions. All other turning movements are projected to operate at acceptable LOS D or better during both the No Build and Build Conditions.

The capacity results for the intersection of N. Farnsworth Ave. and Molitor Rd. are summarized in **Table 4**.

Table 4 2021 Capacity Analysis – N. Farnsworth Ave. and Molitor Rd.

	2021 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)	
	Approach	Movement	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS
Intersection #1: N Farnsworth Ave & Molitor Rd (Signalized)	EB	L	52.2	D	85.0	F	47.3	D	80.9	F
		TR	60.1	E	58.2	E	46.9	D	46.2	D

	SB	L	12.0	B	12.3	B	13.7	B	14.4	B
		T	14.9	B	16.3	B	20.8	C	23.9	C
		TR	14.9	B	16.3	B	20.8	C	23.9	C
		Approach	14.4	B	15.7	B	20.3	C	23.1	C
Intersection		-	31.9	C	36.0	D	29.6	C	33.6	C

The queue results from SimTraffic exceed the available storage of the eastbound left turn lane under both No Build and Build Conditions. The northbound left turn lane storage is exceeded during the morning peak hour under Build conditions.

Intersection of N. Farnsworth Ave. and Driveway 1 (2021)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at an acceptable overall LOS A under Build Conditions. All turning movements and approaches are projected to operate at acceptable LOS C or better during the Build Conditions for both the morning and evening peak hours.

The capacity results for the intersection of N. Farnsworth Ave. and Driveway 1 are summarized in **Table 5**.

Table 5 2021 Capacity Analysis - N. Farnsworth Ave. and Driveway 1

Intersection #2: N Farnsworth Ave & Site Driveway 1 (Unsignalized)	2021 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)	
	Approach	Movement	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS
	EB	Approach			11.5	B			15.6	C
	NB	Approach			0.0	A			0.0	A
		T			0.0	A			0.0	A
	SB	TR			0.0	A			0.0	A
		Approach			0.0	A			0.0	A
	Intersection	-			0.5	A			0.4	A

The queue results from SimTraffic do not appear to exceed the available storage in either the No Build or Build Conditions.

Intersection of Molitor Rd. and Driveway 2 (2021)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A under the Build Conditions. The southbound approach is expected to operate at LOS B under Build Conditions. All other turning movements and approaches are projected to operate at acceptable LOS A during the Build Conditions for the morning peak hour.

The capacity results for the intersection of Molitor Rd. and Driveway 2 are summarized in **Table 6**.

Table 6 2021 Capacity Analysis - Molitor Rd. and Driveway 2

Intersection #3: Molitor Rd & Site Driveway 2 (Unsignalized)	2021 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)	
	Approach	Movement	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS
	EB	Approach			1.2	A			1.0	A
	WB	Approach			0.0	A			0.0	A
	SB	Approach			12.8	B			14.7	B
	Intersection	-			3.8	A			2.9	A

The queue results from SimTraffic do not appear to exceed the available storage of the proposed driveway under Build Conditions.

Capacity Analysis Comparison – No Build vs Build Conditions (Year 2031)

Capacity Analyses were conducted for the No Build and Build conditions (year 2031). The primary purpose for this approach was to compare the results in order to identify areas impacted by the proposed development in the 10-year horizon. The capacity results are included in **Appendix E**.

Intersection of N. Farnsworth Ave. and Molitor Rd. (2031)

Based on the results of the capacity analysis for the 10-year horizon, during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Molitor Rd. is projected to operate at an acceptable overall LOS C under No Build conditions and LOS D under Build Conditions, with an increase in overall delay of only 4.2 seconds for the morning and 4.3 seconds for the evening peak hour.

The eastbound left turning movement is expected to degrade from LOS D to LOS F under build conditions. Westbound thru/right movement is expected to maintain a LOS F during the morning and evening peak hours, under both the No Build and Build Conditions. All other turning movements are projected to operate at acceptable LOS D or better during both the No Build and Build Conditions.

The capacity results for the intersection of N. Farnsworth Ave. and Molitor Rd. are summarized in **Table 7**.

Table 7 2031 Capacity Analysis – N. Farnsworth Ave. and Molitor Rd.

Intersection #1: N Farnsworth Ave & Molitor Rd (Signalized)	2031 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)

	LT	15.4	B	16.9	B	22.5	C	25.6	C	
	TR	15.4	B	16.8	B	22.4	C	25.6	C	
SB	T	15.0	B	16.3	B	21.8	C	24.8	C	
		12.9	B	13.2	B	14.5	B	15.1	B	
	TR	15.4	B	16.8	B	22.4	C	25.6	C	
	Approach	-	C	37.2	D	30.9	C	35.2	D	
Intersection		33.0	C							

The queue results from SimTraffic exceed the available storage of the eastbound left turn lane under both No Build and Build Conditions. The northbound left turn lane storage is exceeded under Build conditions.

Intersection of N. Farnsworth Ave. and Driveway 1 (2031)

Based on the results of the capacity analysis for the 2031 horizon during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at an acceptable overall LOS A during the Build Conditions. All turning movements and approaches are projected to operate at acceptable LOS C or better.

The capacity results for the intersection of N. Farnsworth Ave. and Driveway 1 are summarized in **Table 8**.

Table 8 2031 Capacity Analysis - N. Farnsworth Ave. and Driveway 1

Intersection #2: N Farnsworth Ave & Site Driveway 1 (Unsignalized)	2031 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)	
	Approach	Movement	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS
	EB	Approach			11.7	B			16.2	C
	NB	Approach			0.0	A			0.0	A
		T			0.0	A			0.0	A
	SB	TR			0.0	A			0.0	A
		Approach			0.0	A			0.0	A
Intersection		-			0.5	A			0.4	A

The queue results from SimTraffic do not appear to exceed the available storage in either the No Build or Build Conditions.

Intersection of Molitor Rd. and Driveway 2 (2031)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A under the Build Conditions.

Under Build Conditions the southbound approach is expected to operate at LOS B during the morning peak hour and LOS C during the evening peak hour. All other turning movements and approaches are projected to operate at acceptable LOS A during the Build Conditions for the morning peak hour.

The capacity results for the intersection of Molitor Rd. and Driveway 2 are summarized in **Table 6**.

Table 9 2021 Capacity Analysis - Molitor Rd. and Driveway 2

Intersection #3: Molitor Rd & Site Driveway 2 (Unsignalized)	2031 CONDITIONS		No Build (AM)		Build (AM)		No Build (PM)		Build (PM)	
	Approach	Movement	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS	Delay (S)	LOS
	EB	Approach			1.1	A			0.9	A
	WB	Approach			0.0	A			0.0	A
	SB	Approach			12.9	B			15.2	C
	Intersection	-			3.7	A			2.9	A

The queue results from SimTraffic exceed the available storage under Build Conditions.

Capacity Analysis Comparison – No Build vs Build with Improvements Conditions (Year 2021)

Capacity Analyses were conducted for the No Build and Build with improvements conditions (year 2021). The primary purpose for this approach was to evaluate the results of the proposed improvements. The capacity results are included in **Appendix E**.

Intersection of N. Farnsworth Ave. and Molitor Rd. (2021)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Molitor Rd. is projected to operate at an acceptable

overall LOS C under No Build and Build with Improvements Conditions, with no increase in the overall delay.

Westbound thru/right movement is expected to maintain a LOS F during the morning and LOS E during the evening peak hours, under both the No Build and Build Conditions. All other turning movements are projected to maintain acceptable LOS D or better during both the No Build and Build Conditions.

The capacity results for the improved conditions for the intersection of N. Farnsworth Ave. and Molitor Rd. are summarized in **Table 10**.

Table 10 2021 Capacity Analysis (Improved)- N. Farnsworth Ave. and Molitor Rd.

	2021 CONDITIONS		No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)	
	Approach	Movement	Delay (S)	LOS						
Intersection #1: N Farnsworth Ave & Molitor Rd (Signalized)	EB	L	52.2	D	51.5	D	47.3	D	46.1	D
		TR	60.1	E	52.6	D	46.9	D	39.9	D

	Intersection	-	31.9	C	29.0	C	29.6	C	32.4	C

The queue results from SimTraffic do not exceed the available storage during the morning peak hour. During the evening peak hour, the queue length is reduced under the Improved conditions.

Intersection of N. Farnsworth Ave. and Driveway 1 (2021)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at overall LOS A under the Build with Improvement Conditions.

All turning movements and approaches are projected to operate at acceptable LOS B or better during the Build with Improvement Conditions for both the morning and evening peak hours.

The capacity results for the improved conditions for the intersection of N. Farnsworth Ave. and Driveway 1 are summarized in **Table 11**.

Table 11 2021 Capacity Analysis (Improved) - N. Farnsworth Ave. and Driveway 1

	2021 CONDITIONS		No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)

		R			0.0	A			0.0	A
	SB	Approach			0.0	A			0.0	A
		Intersection	-		0.5	A			0.4	A

The queue results from SimTraffic do not appear to exceed the available storage in either the No Build or Build with Improvement Conditions.

Intersection of Molitor Rd. and Driveway 2 (2021)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A under the Build with Improvement Conditions.

All turning movements and approaches are projected to operate at acceptable LOS C or better during the Build Conditions.

The capacity results for the improved conditions for the intersection of Molitor Rd. and Driveway 2 are summarized in **Table 12**.

Table 12 2021 Capacity Analysis (Improved) - Molitor Rd. and Driveway 2

Intersection #3: Molitor Rd & Site Driveway 2 (Unsignalized)	2021 CONDITIONS		No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)	
	Approach	Movement	Delay (S)	LOS

		Approach			12.1	B			14.0	B
	Intersection	-			3.6	A			2.8	A

The queue results from SimTraffic do not appear to exceed the available storage of the proposed driveway under Improved Conditions.

Capacity Analysis Comparison – No Build vs Build with Improvement

Conditions (Year 2031)

Capacity Analyses were conducted for the No Build and Build with Improvements conditions (year 2031). The primary purpose for this approach was to evaluate the results of the proposed improvements. The capacity results are included in **Appendix E**

Intersection of N. Farnsworth Ave. and Molitor Rd. (2031)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Molitor Rd. is projected to operate at an acceptable overall LOS C under No Build and Build with Improvement Conditions, with no increase in the overall delay.

Westbound thru/right movement is expected to maintain a LOS F during the morning and LOS E during the morning peak hour and to improve from LOS F to LOS E under Build with Improvement conditions during the evening peak hour. All other turning movements are projected to maintain acceptable LOS D or better during both the No Build and Build Conditions.

The capacity results for the intersection of N. Farnsworth Ave. and Molitor Rd. are summarized in **Table 7**.

Table 13 2031 Capacity Analysis (Improved) - N. Farnsworth Ave. and Molitor Rd.

2031 CONDITIONS			No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)	
	Approach	Movement	Delay (S)	LOS						
Intersection #1: N Farnsworth Ave & Molitor Rd (Signalized)	EB	L	52.5	D	52.2	D	48.4	D	46.2	D
		TR	60.5	E	52.2	D	46.5	D	39.1	D
		Approach	57.2	E	52.2	D	47.4	D	43.1	D
	WB	L	52.9	D	51.6	D	38.8	D	39.0	D
		TR	84.8	F	84.3	F	80.2	F	65.9	E
		Approach	76.2	E	77.6	E	68.3	E	58.8	E
	NB	LT	15.9	B	13.6	B	17.6	B	22.9	C
		T	33.5	C	23.1	C	22.2	C	25.7	C
		TR	33.4	C	23.0	C	22.1	C	25.6	C
	SB	Approach	32.9	C	22.0	C	22.0	C	25.4	C
		L	12.9	B	14.3	B	14.5	B	17.8	B
		T	15.4	B	18.2	B	22.5	C	30.5	C
		TR	15.4	B	18.1	B	22.4	C	30.4	C
		Approach	15.0	B	17.6	B	21.8	C	29.4	C
	Intersection	-	33.0	C	29.6	C	30.9	C	33.9	C

For the eastbound left turn, the queue results from SimTraffic exceed the available storage under No Build and Build with Improvement conditions. The northbound left turn is not expected to exceed proposed available storage under Improved conditions.

Intersection of N. Farnsworth Ave. and Driveway 1 (2031)

Based on the results of the capacity analysis for the 2031 horizon during the morning and evening peak hour, the intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at an acceptable overall LOS A during the Build with Improvements Conditions.

All turning movements and approaches are projected to operate at acceptable LOS C or better during the Build with Improvements Conditions.

The capacity results for the intersection of N. Farnsworth Ave. and Driveway 1 are summarized in **Table 14**.

Table 14 2031 Capacity Analysis (Improved) - N. Farnsworth Ave. and Driveway 1

2031 CONDITIONS			No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)	
	Approach	Movement	Delay (S)	LOS						
Intersection #2: N Farnsworth Ave & Site Driveway 1 (Unsignalized)	EB	Approach			11.2	B			15.5	C
		Approach			0.0	A			0.0	A
	NB	T			0.0	A			0.0	A
		R			0.0	A			0.0	A
		Approach			0.0	A			0.0	A
	SB	Approach			0.0	A			0.4	A
		Intersection	-		0.5	A				

The queue results from SimTraffic do not appear to exceed the available storage under the No Build or Build with Improvements Conditions.

Intersection of Molitor Rd. and Driveway 2 (2031)

Based on the results of the capacity analysis during the morning and evening peak hour, the intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A under the Build Conditions.

Under Build Conditions the southbound approach is expected to operate at LOS B during the morning peak hour and LOS C during the evening peak hour. All other turning movements and approaches are projected to operate at acceptable LOS B or better during the Build with Improvement Conditions.

The capacity results for the intersection of Molitor Rd. and Driveway 2 are summarized in **Table 15**.

Table 15 2031 Capacity Analysis (Improved) - Molitor Rd. and Driveway 2

	2031 CONDITIONS		No Build (AM)		Build WI (AM)		No Build (PM)		Build WI (PM)	
	Approach	Movement	Delay (S)	LOS						
Intersection #3: Molitor Rd & Site Driveway 2 (Unsignalized)	EB	Approach			1.1	A			0.9	A
		WB	Approach		0.0	A			0.0	A
	SB	L			13.2	B			15.6	C
		R			9.2	A			10.2	B
	Approach				12.3	B			14.4	B
	Intersection	-			3.5	A			2.7	A

The queue results from SimTraffic do not appear to exceed the available storage of the proposed driveway under Build with Improvement Conditions.

Turn Lane Warrant Analysis

Turn lane warrant analysis were performed to determine whether the proposed site will warrant the installation of turn lanes at the proposed site driveways.

Right Turn Lane Warrant Driveway 1

Figure 5 has been extracted from Figure 36-3.A of the Illinois Bureau of Design and Environment Manual, Chapter Thirty-Six, *Intersections*. This figure outlines the traffic volumes required to satisfy a right turn lane warrant at any unsignalized intersection on a high-speed, four-lane urban or rural highway.

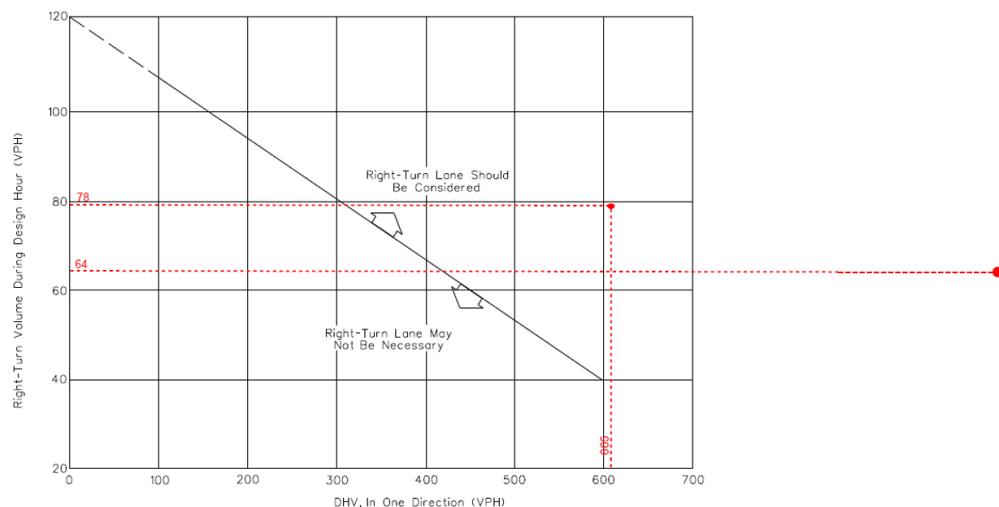

Figure 5 Right Turn Lane Evaluation Warrant at Site Driveway 1

As shown on **Figure 5**, the projected traffic volume falls above the volume threshold, therefore the right turn lane is warranted at this location.

Chapter Thirty-Six, *Intersection* contains additional criteria for the evaluation of a right turn lane warrant. A summary of the criteria is shown in **Table 16**.

Table 16 Right Turn Lane Warrant Criteria Results at Site Driveway 1

Exclusive Right-Turn Lane Criteria ⁽¹⁾	Criteria Met?
At any unsignalized intersection on a two-lane urban or rural highway that satisfies the criteria in Figures 36-3.A;	Yes
At any unsignalized intersection on a two-lane urban or rural highway that satisfies the criteria in Figures 36-3.B;	N/A
On expressways at all public road intersections where the current ADT on the side road is greater than 250;	No
At any intersection where a capacity analysis determines a right-turn lane is necessary to meet the level-of-service criteria;	N/A
At any signalized intersection where the right-turning volume is equal to or greater than 150 vph and where there is greater than 300 vphpl on the mainline;	No
For uniformity of intersection design along the highway if other intersections have right-turn lanes;	No
At any intersection where the mainline is curved to the left and where the mainline curve requires superelevation;	No
At railroad crossings where the railroad is located close to the intersection and a right-turn lane would be desirable to efficiently move through traffic on the railroad;	No
At any intersection where the crash experience, traffic operations, sight distance restrictions (e.g., intersection beyond a crest vertical curve), or engineering judgment indicates a significant conflict related to right-turning vehicles;	No

(1) From the Illinois Bureau of Design and Environmental Manual, Chapter Thirty-Six, *Intersections*.

Driveway 1 meets the criteria for the installation of a right turn lane based on the additional criteria presented in **Table 16**. Therefore, a right turn lane is warranted at site driveway 1.

Right Turn Lane Warrant Driveway 2

Figure 6 has been extracted from Figure 36-3.A of the Illinois Bureau of Design and Environment Manual, Chapter Thirty-Six, *Intersections*. This figure outlines the traffic volumes required to satisfy a right turn lane warrant at any unsignalized intersection on a high-speed, four-lane urban or rural highway.

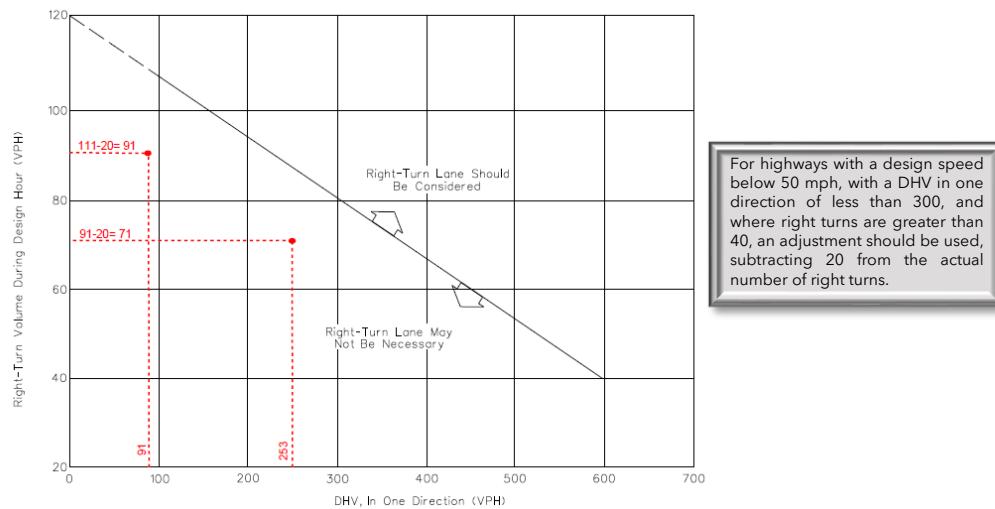

Figure 6 Right Turn Lane Evaluation Warrant at Site Driveway 2

As shown on **Figure 6**, the projected traffic volumes fall below the volume threshold defined by Chapter Thirty-Six, *Intersections*.

Chapter Thirty-Six, *Intersection* contains additional criteria for the evaluation of a right turn lane warrant. A summary of the criteria, and if the proposed site driveway meets the criteria, is shown in **Table 17**.

Table 17. Right Turn Lane Warrant Criteria Results at Molitor Rd and Site Driveway #2

Exclusive Right-Turn Lane Criteria ⁽¹⁾	Criteria Met?
At any unsignalized intersection on a two-lane urban or rural highway that satisfies the criteria in Figures 36-3.A;	No
At any unsignalized intersection on a two-lane urban or rural highway that satisfies the criteria in Figures 36-3.B;	N/A
On expressways at all public road intersections where the current ADT on the side road is greater than 250;	No
At any intersection where a capacity analysis determines a right-turn lane is necessary to meet the level-of-service criteria;	N/A
At any signalized intersection where the right-turning volume is equal to or greater than 150 vph and where there is greater than 300 vphpl on the mainline;	No
For uniformity of intersection design along the highway if other intersections have right-turn lanes;	No
At any intersection where the mainline is curved to the left and where the mainline curve requires superelevation;	No
At railroad crossings where the railroad is located close to the intersection and a right-turn lane would be desirable to efficiently move through traffic on the	No
At any intersection where the crash experience, traffic operations, sight distance restrictions (e.g., intersection beyond a crest vertical curve), or engineering judgment indicates a significant conflict related to right-turning vehicles;	No

(1) From the Illinois Bureau of Design and Environmental Manual, Chapter Thirty-Six, *Intersections*.

As shown in **Table 14**, based on the additional criteria the installation of a right turn lane is not warranted at this location.

Left Turn Lane Warrant Driveway 2

The Illinois Bureau of Design and Environment Manual, Chapter Thirty-Six, *Intersections* do not provide left turn lane warrant analysis values for 30MPH roadways, for a conservative approach this study uses the values for a 40 MPH roadway presented in figure 36-3. G., see **Figure 7**. This figure outlines the traffic volumes required to satisfy a left turn lane warrant at any unsignalized intersection on a high-speed, four-lane urban or rural highway.

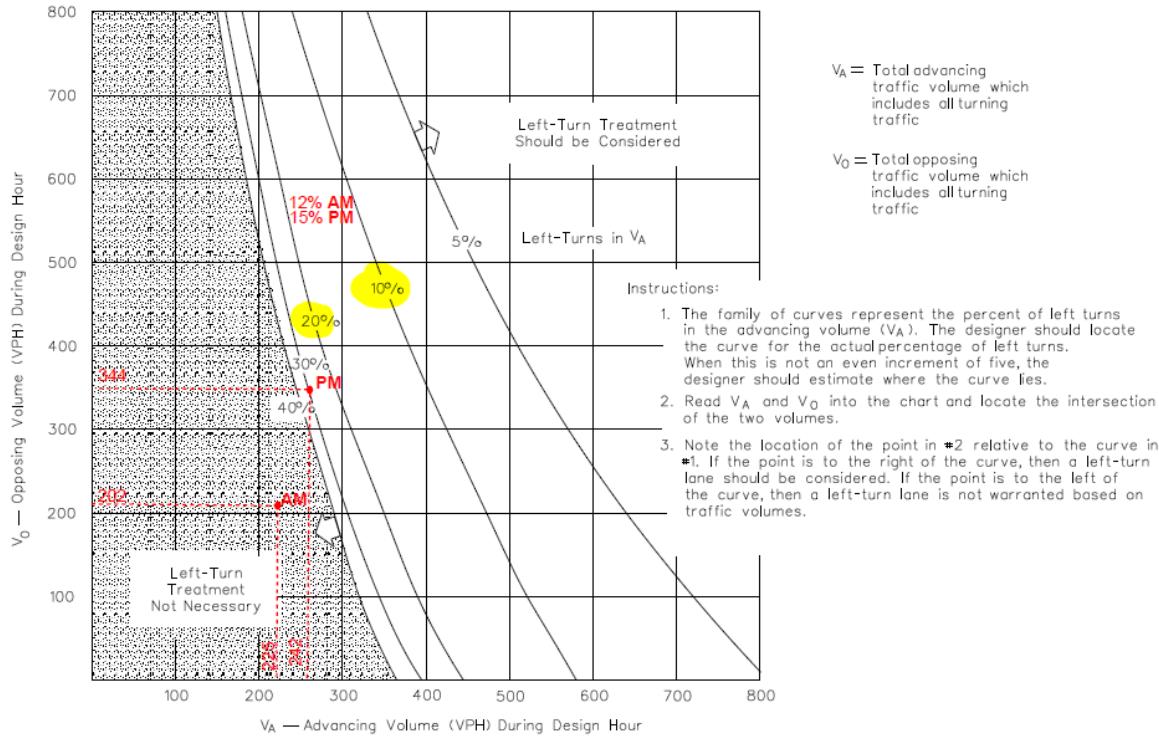

Figure 7 Left Turn Lane Evaluation Warrant at Site Driveway 2

As shown on **Figure 7**, the projected AM and PM traffic volumes do not fall above the threshold for the 12% and 15% curves respectively.

Table 18. Left Turn Lane Warrant Criteria Results at Molitor Rd and Site Driveway #2

Exclusive Left-Turn Lane Criteria ⁽¹⁾	Criteria Met?
At any unsignalized intersection on a two-lane urban or rural highway that satisfies the criteria in Figures 36-3.C, D, E, F, or G;	No
At any signalized intersection where the left-turning volume is equal to or greater than 75 vph for a single turn lane or 300 vph for a dual turn lane;	No
At any intersection where the capacity analysis determines a left-turn lane is necessary to meet the level-of-service criteria, including dual left-turn lanes;	No
For uniformity of intersection design along the highway if other intersections have left-turn lanes (i.e., to satisfy driver expectancy); or	No
At any intersection where the crash experience, traffic operations, sight distance restrictions (e.g., intersection beyond a crest vertical curve), or engineering judgment indicates a significant conflict related to left-turning vehicles	No

(1) From the Illinois Bureau of Design and Environmental Manual, Chapter Thirty-Six, *Intersections*.

As shown in **Table 18**, the installation of a left turn lane is not warranted at this location.

Proposed Improvements

Considering the results of the capacity analysis and turn lane warrant analysis, under build conditions, the following improvements are recommended:

Improvements on N. Farnsworth Ave. and Molitor Rd.

- Eastbound left turn increase storage from 75 feet to 150 storage and 125 taper.
- Northbound left turn increase storage from 150 feet to 180 feet. (stripped)
- Optimize splits.

Improvements on N. Farnsworth Ave. and Driveway 1

- Southbound right turn lane.

Improvements on Molitor Rd. and Driveway 2

- Southbound (Driveway 2) one entry Lane/Two Exit Lanes (without a median). The two exit lanes to be dedicated right and left turn lane.

Conclusions and Recommendations

- The proposed development is expected to generate a total of 444 trips during the morning peak hour and 366 trips during the evening peak hour. It is anticipated that during the morning peak hour 338 of these are existing trips while the remaining 106 are expected to be primary trips. During the evening peak hour 278 of these trips are expected to be existing trips and the remaining 88 are expected to be new trips.
- For the purposes of this analysis, it is anticipated that the proposed development will be constructed and fully operational by the year 2021.
- The following scenarios were evaluated as part of this study:
 - 2021 Conditions without the proposed development - (2021 No Build)
 - 2021 Conditions with the proposed development - (2021 Build)
 - 2031 Conditions without the proposed development - (2031 No Build)
 - 2031 Conditions with the proposed development - (2031 Build)

- To evaluate the traffic operations, intersection capacity analyses were completed. The results indicate the following:

- The intersection of N Farnsworth Ave. and Molitor Rd. is expected to operate at acceptable LOS C during No Build and LOS D under Build conditions, with an increase in overall delay of less than 5 seconds for both the 2021 and 2031 horizon.

The eastbound left turning movement is expected to degrade from LOS D to LOS F under build conditions. Westbound thru/right movement is expected to maintain a LOS F during the morning and LOS E during the evening peak hours, under both the No Build and Build Conditions. All other turning movements are projected to operate at acceptable LOS D or better during both the No Build and Build Conditions for both the 2021 and 2031 horizon.

- The intersection of N. Farnsworth Ave. and Driveway 1 is projected to operate at an acceptable overall LOS A. Site driveway 1 is projected to operate at acceptable LOS C or better under build and Build with Improvement conditions. All other turning movements and approaches are projected to operate at LOS A.
- The intersection of Molitor Rd. and Driveway 2 is projected to operate at an acceptable overall LOS A. Site driveway 2 is projected to operate at acceptable LOS C or better under build and Build with Improvement conditions. All other turning movements and approaches are projected to operate at LOS A.
- Turn lane warrant analysis were performed to determine whether the proposed site will warrant the installation of turn lanes at the proposed site driveways. The results indicate that a right turn lane will be warranted at driveway 1 based on the criteria presented on the Illinois Bureau of Design and Environment Manual, Chapter Thirty-Six, *Intersections*.
- Considering the results of the capacity analysis, the following improvements are recommended:
 - **Improvements on N. Farnsworth Ave. and Molitor Rd.**
 - Eastbound left turn increase storage from 75 feet to 150 storage and 125 taper.
 - Northbound left turn increase storage from 150 feet to 180 feet. (stripped)
 - Optimize splits.
 - **Improvements on N. Farnsworth Ave. and Driveway 1**
 - Southbound right turn lane.
 - **Improvements on Molitor Rd. and Driveway 2**
 - Southbound (Driveway 2) one entry Lane/Two Exit Lanes (without a median). The two exit lanes to be dedicated right and left turn lane.

LAYOUT NOTES

- THE CONTRACTOR SHALL FIELD VERIFY THE ELEVATIONS OF THE BENCHMARKS PRIOR TO COMMENCING WORK. THE CONTRACTOR SHALL ALSO FIELD VERIFY LOCATION AND ELEVATION OF EXISTING PIPE INVERTS, FLOOR ELEVATIONS, CURB OR PAVEMENT WHERE MATCHING INTO EXISTING WORK. THE CONTRACTOR SHALL FIELD VERIFY HORIZONTAL CONTROL BY REFERRING SHOWN COORDINATES TO KNOWN PROPERTY LINES. NOTIFY ENGINEER OF DISCREPANCIES IN EITHER VERTICAL OR HORIZONTAL CONTROL PRIOR TO PROCEEDING WITH WORK.
- REFER TO ARCHITECTURAL PLANS FOR EXACT BUILDING DIMENSIONS.
- DIMENSIONS THAT LOCATE THE BUILDING ARE MEASURED TO THE OUTSIDE FACE OF THE BUILDING.
- SIGN CONSTRUCTION AND PAVEMENT MARKINGS SHALL CONFORM TO THE REQUIREMENTS OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, CURRENT EDITION.
- COORDINATE WORK WITHIN FARNSWORTH AVE. AND MOLITOR RD. WITH THE CITY OF AURORA. TRAFFIC CONTROL SHALL CONFORM TO IDOT AND THE CITY OF AURORA STANDARDS FOR WORK WITHIN THE ROW.
- ALL RADII ARE DIMENSIONED TO THE BACK OF CURB.
- ALL CURB AND GUTTER IS INTEGRAL TO PAVEMENT UNLESS NOTED OTHERWISE. REFER TO THE DETAIL SHEETS FOR CURB DETAILS.
- SOME FIELD ADJUSTMENTS MAY BE NECESSARY AT POINTS WHERE PROPOSED PAVEMENT, CURB AND SIDEWALKS MEET EXISTING PAVEMENT, CURB AND SIDEWALKS. REVIEW ANY REQUIRED CHANGES WITH ENGINEER PRIOR TO CONSTRUCTION OF WORK.
- ELECTRICAL CIRCUITRY TO SITE LIGHTING AND PYLON SIGN SHOWN ON ARCHITECTURAL PLANS.
- FOR REQUIRED PAVEMENT REMOVAL ADJACENT TO THE CURB AND GUTTER REMOVAL WITHIN RIGHT OF WAY, A FULL DEPTH SAWCUT SHALL BE UTILIZED AND SHALL NOT BE LESS THAN 2' IN WIDTH.
- FOR PAVEMENT PATCHING WITHIN THE RIGHT OF WAY THE BACKFILL MATERIAL USED SHALL BE DRY AGGREGATE. THE THICKNESS OF THE PAVEMENT REPLACEMENT SHALL BE A MINIMUM OF THE SAME THICKNESS AS THE EXISTING PAVEMENT STRUCTURE. THE MIXES USED SHALL CONFORM TO THE SPECIFICATIONS AND REQUIREMENTS SET BY THE WISCONSIN DEPARTMENT OF TRANSPORTATION (WisDOT).
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR PREPARATION, COORDINATION AND OBTAINING APPROVAL OF A TRAFFIC MANAGEMENT PLAN IF CLOSURES OF LANES EXCEED THE CRITERIA SPECIFIED BY IDOT OR THE CITY OF AURORA.

Daniela,

Thanks for the response to my questions.

I am ok with the analysis focusing on the weekday peak periods, just wanted to check if a weekend period would be included.

Bob

Good Morning Robert,

Thank you for the comments.

The attached document contains the complete scope/methodology of the study. Please see the responses to your comments below:

- 1- *Turn lane warrant analysis for the proposed new driveway along E. Colonial Drive*
Where is this located, "E. Colonial Drive"?

Response: The turn lane warrant analysis will be conducted at the proposed site driveways along N Farnsworth Avenue and along Molitor Rd.

- 2- For the capacity analysis, I assume weekday peak hour periods for AM and PM but will there be an analysis involving a weekend peak hour period, say a Saturday afternoon?

Response: The capacity analysis is proposed for the weekday AM and PM peak hour. Let me know if you consider necessary to include Saturday mid-day in the scope.

Please let us know if you have any questions.

Best,

DANIELA JURADO

Good Morning Bob,

We are currently working on the traffic impact study for a Convenience Store Project to be relocated on the northwest corner of N Farnsworth Avenue and Molitor Road in the city of Aurora.

I am sending this email to discuss the TIA methodology. Our proposed scope is as follows:

1. Trip generation calculations for the proposed development – utilizing the ITE Trip Generation Manual, 10th Edition
2. Traffic assignment (trip distribution) for the proposed development
3. Manual Turning Movement Counts during the AM and PM peak hours at the following intersection:
 - a. N Farnsworth Avenue and Molitor Rd
4. Capacity analysis during the AM and PM peak hours at the following intersections:
 - a. N Farnsworth Avenue and Molitor Rd
 - b. N Farnsworth Avenue and site driveway 1
 - c. Molitor Rd and site driveway 2
- Study periods:
 - d. 2021/2031

- e. No Build and Build Scenarios
- 5. Turn lane warrant analysis for the proposed new driveway along E. Colonial Drive

We have attached the proposed methodology statement for the traffic impact study. Will the city concur with this methodology?

Please let us know if you have any questions or require further clarification.

Thank you in advance,

DANIELA JURADO

Engineer I | **BOWMAN**

TRAFFIC IMPACT STUDY C-STORE W GAS STATION N FARNSWORTH, AURORA IL SCOPING/METHODOLOGY STATEMENT

Scoping Meeting Date: Electronic Coordination

Applicant's Consultant: Bowman Consulting Group

Applicant's Contact information: Andrew J Petersen (321 -270 - 8987 / apetersen@bowmanconsulting.com)
Daniela Jurado (321 -270 - 8977 / djurado@bowmanconsulting.com)

(1) LOCATION OF PROPOSED PROJECT: See Figure 1

Municipality: City of Aurora, IL

Roadway Jurisdiction: N Farnsworth Avenue City of Aurora

Molitor Road City of Aurora

(2) DESCRIPTION OF PROPOSED PROJECT:

The proposed project consists on the development of a currently vacant parcel located on the Northwest corner of the intersection of N Farnsworth Avenue and Molitor Road, in the city of Aurora, Illinois. The proposed development comprises a 5,200 square feet Convenience Store and a canopy with 14 Vehicle Fueling Positions VFP. Access to the development will be provided by one Full-access driveway along Molitor Road and one Right-in/Right-out driveway along N Farnsworth Avenue.

Trip generation rates were extracted from the Institute of Transportation Engineers 10th Edition. the trip generation is presented in **Table 1**. The proposed Trip Distribution is presented in **Figure 2**.

(3) PURPOSE OF THE ASSESSMENT:

The purpose for the study is threefold: to determine the number of trips generated by the proposed site; to determine the potential impact, if any, of the proposed development on the roadway network; to propose improvements, if required.

Capacity analyses will be prepared for the existing, build out conditions, buildup 10 year horizon and build out conditions with improvements (if required). Turn lane warrant analyses will be completed at the proposed driveway access points along N Farnsworth and Molitor Road. The results of the study will be summarized in a report document with graphics and back up data.

(4) DEVELOPMENT SCHEDULE:

Anticipated Opening Date: 2021

Analysis Date: 2021/2031

(5) STUDY INTERSECTIONS (See Figure 2):

- N Farnsworth Avenue and Site Driveway 1 (Right-in/Right-out driveway)
- Molitor Road and Site Driveway 2 (Full access driveway)
- N Farnsworth Avenue and Molitor Road

(6) STUDY AREA TYPE: Urban: x Rural:

(7) ANALYSIS PERIODS AND TIMES:

AM Peak hour	7:00 AM - 09:00 AM
PM Peak hour	4:00 PM - 06:00 PM

(8) TRAFFIC ADJUSTMENT FACTORS:

(a) Seasonal Adjustment: N/A

(b) Annual Base Traffic Growth: See Table 2 Source: Approximate Growth average from ADT's IDOT Traffic Count Data online

(9) OTHER PROJECTS WITHIN STUDY AREA TO BE ADDED TO BASE TRAFFIC:

No

(10) APPROVAL OF DATA COLLECTION ELEMENTS AND METHODOLOGIES:

<u>Proposed Location</u>	<u>Period (Avg Day)</u>	<u>Type</u>
-N Farnsworth Ave and Molitor Rd	AM/PM	Turning Movement Counts

(11) CAPACITY/LOS ANALYSIS

<u>Location</u>	<u>Period (Avg Day)</u>	<u>Type</u>
-N Farnsworth Avenue and Site Driveway 1 (Right-in/Right-out driveway)	AM/PM	Synchro (HCS)
-Molitor Road and Site Driveway 2 (Full access driveway)	AM/PM	Synchro (HCS)
-N Farnsworth Avenue and Molitor Road	AM/PM	Synchro (HCS)

(12) ROADWAY IMPROVEMENTS/MODIFICATIONS BY OTHERS TO BE INCLUDED:

No

(13) OTHER NEEDED ANALYSES:

(a) Signal Warrant Analysis:

No

(b) Required Signal Phasing/Timing Modifications:

TBD

(c) Analysis of the Need for Turning Lanes:

- N Farnsworth Avenue and Site Driveway 1 (Right-in/Right-out driveway)
- Molitor Road and Site Driveway 2 (Full access driveway)

(d) Turning Lane Lengths:

95th Percentile Synchro Queue

(e) Queuing Analysis:

- N Farnsworth Avenue and Site Driveway 1 (Right-in/Right-out driveway)
- Molitor Road and Site Driveway 2 (Full access driveway)
- N Farnsworth Avenue and Molitor Road

(14) ADDITIONAL COMMENTS OR RECOMMENDATIONS RELATIVE TO THE SCOPE OF THIS PROJECT:

**TRAFFIC IMPACT STUDY
SCOPING/METHODOLOGY STATEMENT**
